

Valerie Gilbert is an Energy Analyst with Energility LLC. She works with small companies and Houses of Worship to determine building energy profiles and assist in the development of energy management plans. She is a firm believer in “Everything is Connected” - that we cannot cause harm to the earth without causing harm to ourselves and every living spirit.

After serving in the Air Force for 4 years, Valerie worked for Ford Aerospace Company for 13 years in the roles of technical writer at Johnson Space Center and as a field engineer installing, maintaining, and training medical personnel on telemedicine systems at teaching universities and military hospitals. After volunteering for Dayton Habitat for Humanity Women Build for two

summers, she discovered a love of building. Believing education never stops, Valerie returned to school and graduated with a B.S. in Architectural Engineering from California Polytechnic State University San Luis Obispo.

It was during her time at Cal Poly that the stirrings of environmentalism went from ambers to full flame. A LEED Accredited Professional since 2009, She has been involved in several projects that obtained Silver certification or better. Further training at Pacific Gas and Electric Company’s Pacific Energy Center in San Francisco and the Southern California Edison Energy Training Center in Tulare added to her energy systems knowledge.

Currently, Valerie lives in Columbus, Ohio where she is exploring her new surroundings.
